- | | | |
|-------------------|------------------|--|
| ✓ Light weight | ✓ Does not crack | ✓ 8 Layers coating |
| ✓ Easy to install | ✓ Does not tear | ✓ Resistant to earthquakes, typhoons, excessive heat and cold. |
| ✓ Fire proof | ✓ Does not curl | ✓ Shortens the construction period |

ADVANTAGES

The most relevant advantages of basalt granules derive from the nature of the coloured material itself. Basalt is an igneous rock of volcanic nature that can be found in the form of plagioclase-pyroxene group mineral and has an elevated specific

weight, low porosity and an excellent opacity to ultraviolet radiation. These UV coated basalt granules are very hard and have an elevated thermal and mechanical resistance.
